技术规格

Background:	This gene encodes an endoplasmic reticulum associated protein that is involved in glycosylphosphatidylinositol (GPI)-anchor biosynthesis. The GPI anchor is a glycolipid found on many blood cells and which serves to anchor proteins to the cell surface. The protein encoded by this gene is a subunit of the GPI N-acetylglucosaminyl (GlcNAc) transferase that transfers GlcNAc to phosphatidylinositol (PI) on the cytoplasmic side of the endoplasmic reticulum.
Applications:	IHC
Name of antibody:	PIGH
Immunogen:	Synthesized peptide derived from C-terminal of human PIGH.

Full name:	phosphatidylinositol glycan anchor biosynthesis, class H
Synonyms :	GPI-H
SwissProt:	Q14442
IHC positive control:	Human brain tissue
IHC Recommend dilution:	50-100
