技术规格

Background:	This gene encodes a component of the NDC80 kinetochore complex. The encoded protein consists of an N-terminal microtubule binding domain and a C-terminal coiled-coiled domain that interacts with other components of the complex. This protein functions to organize and stabilize microtubule-kinetochore interactions and is required for proper chromosome segregation.
Applications:	WB, IF
Name of antibody:	NDC80
Immunogen:	Synthesized peptide derived from internal of human KNTC2.
Full name:	NDC80 kinetochore complex component
Synonyms :	HEC; HEC1; TID3; KNTC2; HsHec1; hsNDC80
SwissProt:	O14777

WB Predicted band size:	74 kDa
WB Positive control:	Jurkat cells lysate
WB Recommended dilution:	500-3000
IF positive control:	Huvec cells
IF Recommend dilution:	100-500
