技术规格

| Background: | This gene encodes a protein that is a multi-ligand type- 1 receptor with similarity to the yeast carboxypeptidase Y sorting receptor Vps10 protein. The encoded protein, a trans-Golgi network (TGN) transmembrane protein, bin ds a number of unrelated ligands that participate in a wide range of cellular processes; however, it lacks the t ypical features of a signalling receptor. In the TGN, furi n mediates the activation of the mature binding form. |
